Let's get to know each other

- What is your background?
- What is your motivation coming here today?
- Are you familiar with VSCode, Git, Docker, Python, … ?

With funding from the:
Federal Ministry of Research, Technology and Space

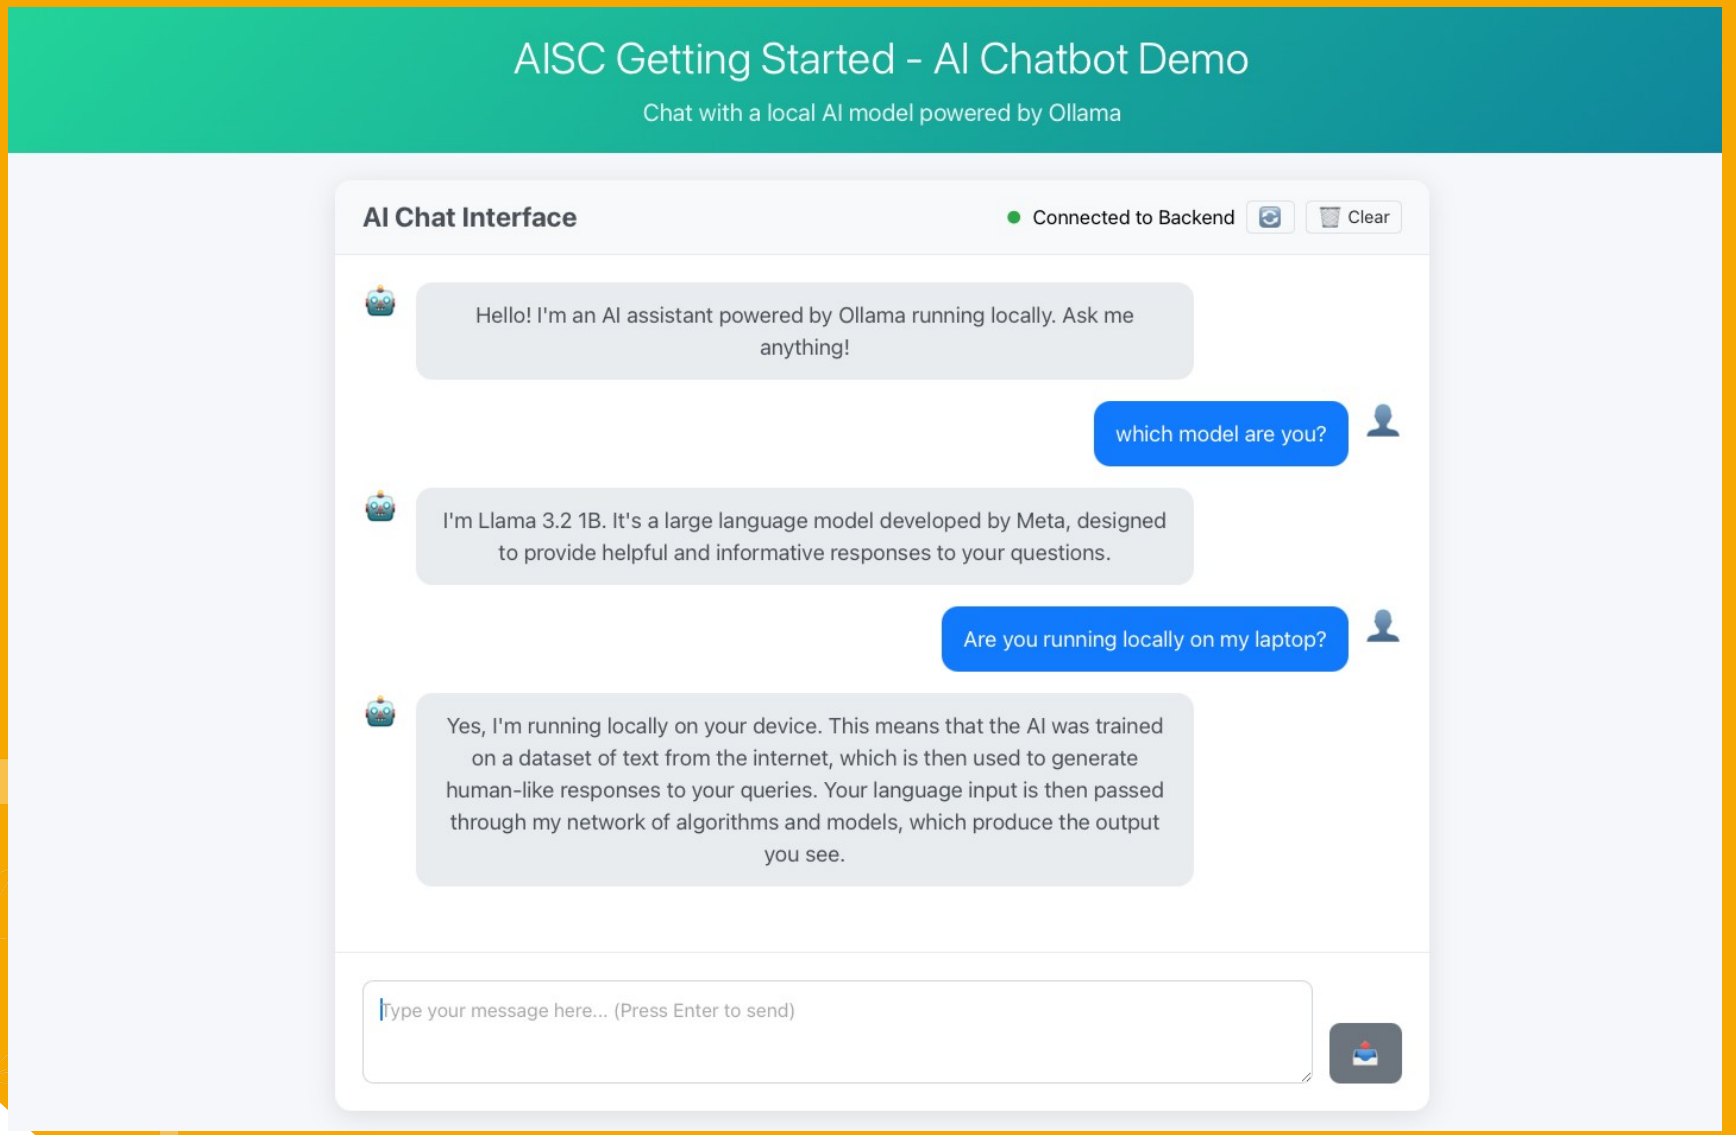

KI Service Zentrum
by Hasso-Plattner-Institut
HPI

Goal: Set up your environment

1. VS Code
2. WSL
3. Git
4. Python
5. UV
6. Ollama
7. Docker Desktop
8. Example Application: Local Chatbot

With funding from the:
Federal Ministry
of Research, Technology
and Space

Overview of the software

Federal Ministry of Research, Technology and Space

KI Service Zentrum
by Hasso-Plattner-Institut

Visual Studio Code (VS Code)

- Code-Editor:
  - Lightweight
  - Cross-platform
  - Expandable with extensions
- Supports various tools:
  - Python, Jupyter Notebook, Git, Docker, SSH
- Integration of coding assistants (e.g., Claude)

With funding from the:
Federal Ministry of Research, Technology and Space

KI Service Zentrum
by Hasso-Plattner-Institut

HPI

GitHub & Git

- Platform for version control of code
  - Development, version control, review, and documentation

With funding from the:

Federal Ministry
of Research, Technology
and Space

KI Service Zentrum
by Hasso-Plattner-Institut

HPI

Python

- General-purpose programming language with key libraries for AI and data science
  - NumPy: numerical computing
  - PyTorch: neural networks
  - Librosa: audio processing
  - ...
- Extensive learning resources and tutorials available
- Suitable for data processing, model training, ...

With funding from the:

Federal Ministry
of Research, Technology
and Space

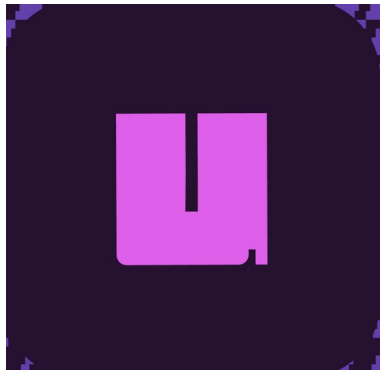

KI Service Zentrum
by Hasso-Plattner-Institut

HPI

UV

- Fast Python package and project manager
  - Handles package installation and dependency management
  - Creates reproducible development environments, ensuring consistent package versions

- Ensures code runs reliably across different machines and operating systems
  - Windows 10, 11, XP
  - Linux Mint, Ubuntu, Debian
  - MacOS

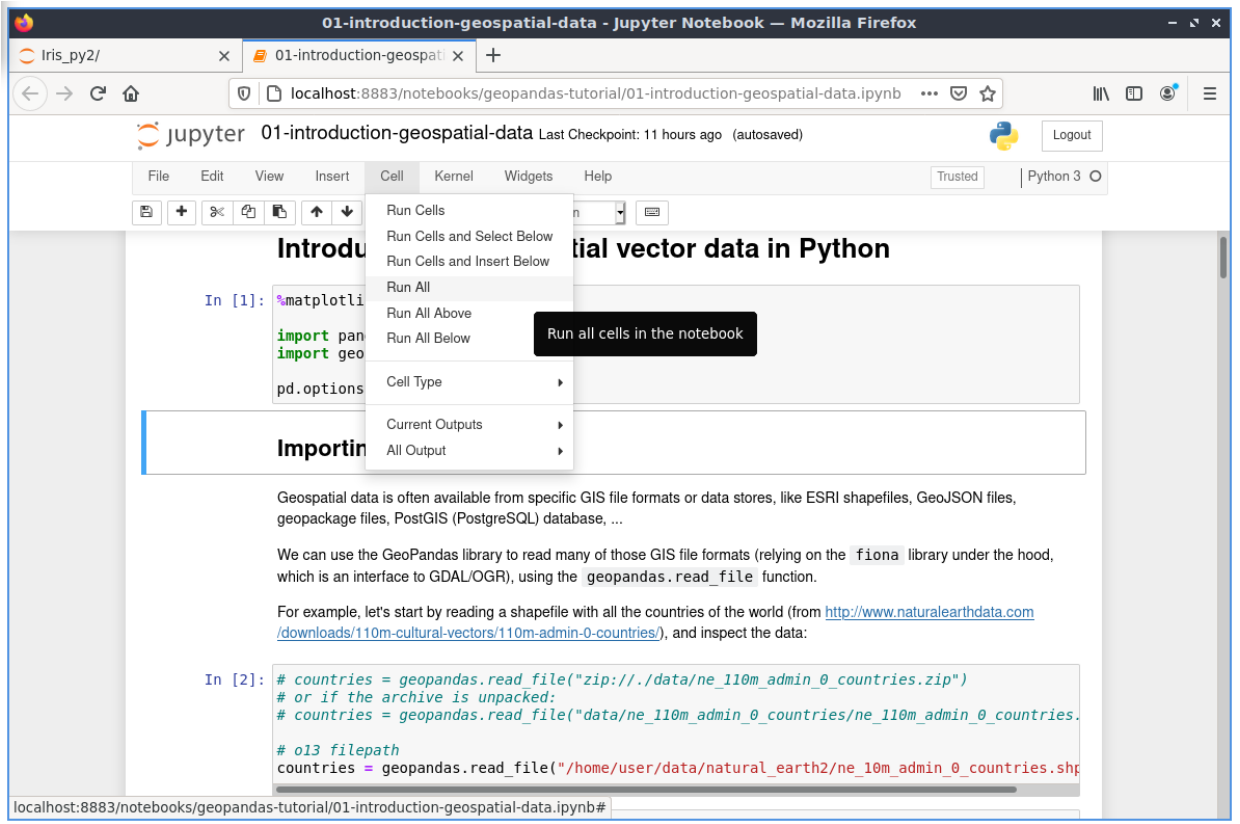

With funding from the:

Federal Ministry
of Research, Technology
and Space

Jupyter notebooks

- Supports code, narrative text, equations (Markdown), and visualizations
- Ideal for exploratory data analysis, prototyping, and teaching
- Code cells can be executed independently --> Easy debugging

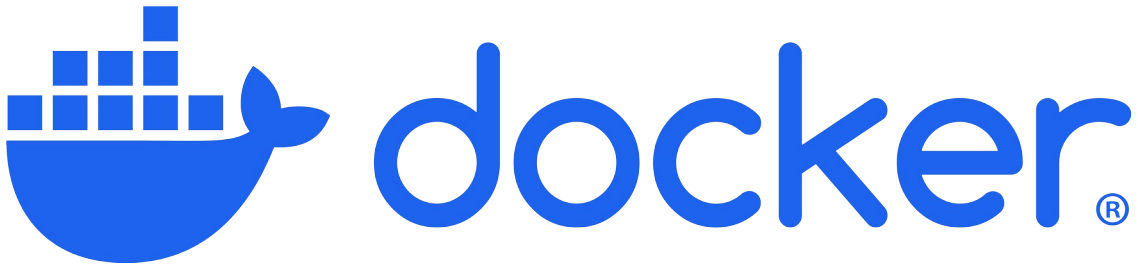

With funding from the:
Federal Ministry of Research, Technology and Space

KI Service Zentrum
by Hasso-Plattner-Institut
HPI

Docker

- Container platform for packaging reproducible runtime environments
  - Enables applications to run consistently across machines, servers, and high-performance clusters (HPC)
  - Solves "works on my machine" problem
- Ideal for complex software stacks

With funding from the:
Federal Ministry
of Research, Technology
and Space

AI for Everybody — Getting Started

This repository hosts the **Getting Started** workshop offered by the AI Service Centre Berlin Brandenburg. It introduces the development tools and workflows — VSCode, Git, WSL, Python, UV, Ollama, and Docker — that participants will use across our workshops.

Workshop materials

All workshop content lives in `03_workshop/`. The workshop's own README is the entry point:

`03_workshop/README.md`

It contains the agenda, the per-tool guides, the Jupyter notebooks for replay at home, and the slides.

Example application

This repository also includes a small chatbot application that demonstrates what you can build once your environment is set up:

- `01_frontend/` — React chat interface
- `02_backend/` — FastAPI server with Ollama integration
- `docker-compose.yml` — runs the full stack locally

The chatbot is the final demo of the workshop (section 8). See `03_workshop/guides/08_chatbot_demo.md` for the walkthrough.

ADVISORY

AI Advisory

- General Questions regarding AI,
- Computing Infrastructure,
- Model, Architecture, Framework Selection

AI Pilot Projects (3 months)

1. Understanding and Identifying the Use Case
2. Specifying the Use Case
3. Developing a Solution
4. Finalizing and Documenting

Cooperations

- Co-organized Network Meetings or Workshops

Start-up Support

- All of the above
- Support with Networking

Infrastructure

Training
- 8 x 8 NVIDIA H100 GPU

Inference
- 5 x 8 NVIDIA A30 GPU

ARM Server
- Ampere Altra Max M128-30 CPU
- 2 x NVIDIA L40 GPUs

GPU Server
- AMD Epyc CPU
- 8 x NVIDIA L40S GPU

Edge
- ARMv8 CPU
- NVIDIA Jetson AGX Module

Storage
- 1.5 PB NVRAM

Network
- 400 Gb/s Infiniband
- 200 Gb/s Ethernet
